

When 4 channels are not enough ...

DLM4000 Series Mixed Signal Oscilloscope

Bulletin DLM4000-01EN

The DLM4000 is the world's first 8 channel oscilloscope providing comprehensive measurement and analysis capabilities for embedded, automotive, power and mechatronics applications.

Representing decades of experience in providing quality test and measuring tools, the DLM4000 is designed to satisfy the wide ranging needs of engineers today and in the future.

The hardware optimized architecture in the DLM4000 enables measurements and signal processing to be carried out in real time. This means that signals from multiple channels are promptly captured and measurements are always performed and updated at high speed.

The DLM4000 is:

Versatile – The number of analog and digital channels, their flexibility and the wealth of measurement and analysis features enable the DLM4000 to solve the broadest range of test requirements.

Intuitive – Via the straightforward interface, users can automatically or manually split the display to separate individual channel waveform while maintaining their full dynamic range. The details of signals can therefore be quickly analyzed irrespective of the number of channels in use.

Capable – As intelligent control permeates more and more sectors of the industry from consumer electronics to industrial drives, the signals that engineers need to look at for testing become faster and more complex. The DLM4000 delivers the features and performance that engineers need in an advanced oscilloscope.

Why choose Yokogawa

Our passion for measurement

Yokogawa believes that precise and effective measurement lies at the heart of successful innovation – and has focused its own R&D on providing the tools that researchers and engineers need to address their challenges both great and small.

Our heritage

Yokogawa has been developing measurement solutions for almost 100 years, consistently finding new ways to give R&D teams the tools they need to gain the best insights from their measurement strategies. Our oscilloscope design has been led by customers looking for ease-ofuse and functionality.

Our commitment

Yokogawa takes pride in its reputation for quality, both in the products we deliver – often adding new features in response to specific client requests – and the level of service and advice we provide to our clients, helping to devise measurement strategies for even the most challenging environments.

Superior functionality

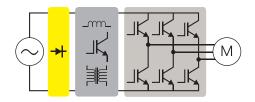

For today's challenges in embedded, automotive, power and mechatronics. The DLM4000 – Eight-channel, 500 MHz bandwidth oscilloscope.

Motor control & inverter circuit development

The key to efficient and reliable highperformance electric motors is the modern inverter design, or 'Intelligent Power Module'. Multi-channel, high-speed waveform

measurement is an absolute necessity. Four channels are simply not enough. Boasting eight true analog inputs, the DLM4000 empowers today's engineer with a convenient and comprehensive measurement system.

Example: 3 voltage & 3 current measurements of a 3-phase motor Measurement of the gate-drive signals of six IGBTs within the inverter

	L		1
-	d.	C	

Limitation of 4 ch scope

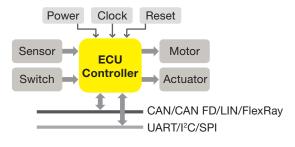

Whole-system measurement is impossible with a fourchannel scope; the real difficulty is measuring the timing between IGBT gate signals within the inverter. Voltage and current measurements between 3 phases and the IO of the motor driver IC is a very challenging test with a fourchannel scope. The truly practical solution is an eightchannel MSO.

Electronic control unit & mechatronic test

Numerous I/O analog, digital, and serial-bus waveforms surrounding the Electronic Control Unit (ECU) must be measured. The DLM4000 offers ample channel-count and architecture to

monitor eight analog channels and up to 24-bits of logic input while simultaneously performing protocol analysis such as UART, I²C, SPI, CAN, CAN FD, LIN and FlexRay. The DLM4000 can speed up the R&D process when four channels are not enough.

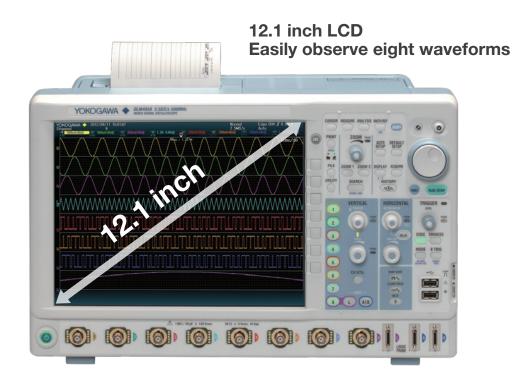

Example: Analog I/O and serial bus controller signals Stringent real time test of digital waveforms in the analog domain.

Limitation of 4 ch MSO

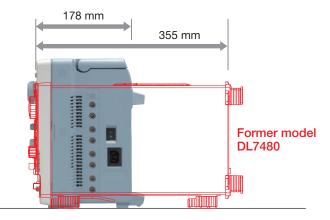

The additional logic inputs of a four-channel MSO mixedsignal oscilloscope provides enough channels, but this method has a blind-spot. Digital waveform analysis using logic inputs alone cannot reveal anomalies such as voltage drift, noise, distortion or ringing, and measure risefall times. ECU testing requires stringent examination of all digital waveforms – and analog input channels are the best tool for the job. ⁵ The portable eight-channel DLM4000 is the daily instrument of choice.

Portable

Modest 178 mm depth Half of the former model DL7480

Long waveform memory Up to 250 MPoints

The two advantages of a long waveform memory are the abilities to capture for long periods of time and to maintain high sample rates. Thus achieving higher effective measuring bandwidths for all time base settings.

<Basic Formula>

Measuring time = Memory length/Sample rate

With the maximum memory installed (/M3 option), in single shot mode, a 10 kHz signal lasting for more than one hour can be captured. The same memory can capture a 200 millisecond signal at a sampling rate of 1.25 GS/s.

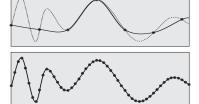

Relationship between measuring time and sample rate in 250 Mpoint

Sample rate	Maximum measuring time
1.25 GS/s	0.2 s
125 MS/s	2 s
12.5 MS/s	20 s
1.25 MS/s	200 s
125 kS/s	2000 s
62.5 kS/s	5000 s

Caution is needed when using an oscilloscope that does not have enough memory, which can cause lack of sample rate and will possibly fail to capture waveforms accurately.

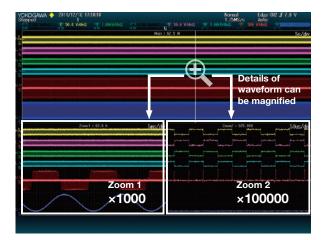

Sample rate is too low.

Sample rate is fairly high.

Two fully independent zoom windows

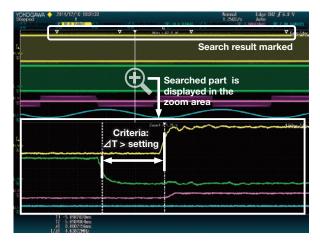

Enabling two fully independent zoom windows allows users to analyze the cause and effect of abnormal behaviors over all input channels. Users can also view and compare the details and timing of different serial buses operating at different speeds.

Detailed waveform measured for 50 seconds are shown in 50 milliseconds and 500 microseconds span.

Advanced waveform search functions

Single waveform acquisitions of up to 250 MPoints can be searched using various criteria.

Waveform search using "State width"

7 History function

Automatically capture and replay up to 50000 waveforms

The DLM4000 can capture and replay up to 50000 individual acquisitions (/M3 option). These can be displayed one at a time or as an accumulation. Using the search and measurement functions, abnormal signals can therefore be quickly isolated, analyzed and precisely categorized without needing to carefully configure triggers to capture rare events.

History search function

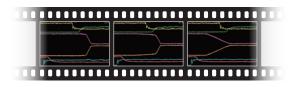

Search up to 50000 waveform history records based on detailed search parameters using the history search function.

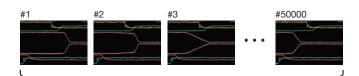

Searching for waveforms that pass through or do not pass through a rectangular zone placed on screen.

Replay function

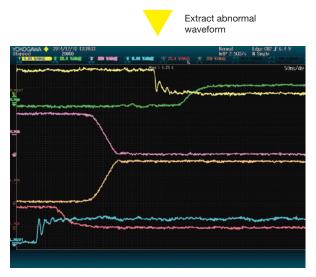

Automatically play back, pause, fast forward, and rewind waveform history records.

Accumulate display mode

Single acquisition display mode

Application specific analysis options

Serial bus analysis function

UART (RS232) /I²C/SPI/CAN/CAN FD/LIN/FlexRay/SENT/ PSI5/CXPI

Dedicated trigger and analysis options are available for various serial buses of both in-vehicle and embedded systems. A wide variety of trigger combinations can be set, including ID and Data combinations, which can also be combined with conventional edge triggers. (Trigger functions of some of the serial buses are not supported.)

Serial bus auto-setup saves time

An intelligent serial bus auto-setup detects bit-rate and voltage threshold automatically and enables the DLM4000 to be quickly configured.

Up to 4 buses simultaneously

Analysis can be performed at high speed simultaneously on up to four different buses operating at different speeds. This is enhanced by the extensive search facilities, allowing the user to look for specific data in the very long memory. The dual-zoom facility means that different buses can be viewed and debugged alongside each other.

CAN, LIN, SPI, I²C can be viewed simultaneously by using zoom.

Four bus decode and list display

Related Accessories

Differential probe PBDH1000 (701924)

DC to1.0 GHz bandwidth1 MΩ, approximately 1.1 pF Maximum differential input voltage range: ±25 V

Differential probe (701920)

DC to 500 MHz bandwidth 100 kΩ, approximately 2.5 pF Maximum differential input voltage range: ±12 V

Logic probe PBL100/PBL250 (701988/701989)

100 MHz/250 MHz toggle frequency 1 MΩ, 10 pF/100 kΩ, 3 pF

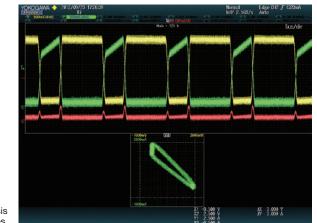

Power supply analysis function (/G3, /G4 option)

The /G3 and /G4 options enable switching loss, joule integral (I²t), SOA (safe operating area), harmonics based on EN61000-3-2, and other power parameters to be measured and analyzed.

Switching loss analysis

9

The switching loss of the voltage and current input waveforms can be computed (U(t) \times I(t)) over long time periods. The turn-on/off loss, the loss including the continuity loss, and the loss over many cycles of the 50 Hz/60 Hz power line can be calculated and analyzed.

Switching loss and SOA analysis of power devices

Power measurement

The DLM4000 can also be used as a power meter by providing automated measurement of power parameters for up to two pairs of voltage and current waveforms, such as the active power, apparent power and power factor. These values can then be statistically processed and calculated.

Features and benefits

Waveform computation

The DLM4000 provides powerful and flexible math functions such as arithmetic, filtering and FFT. Up to 4 math channels are available.

FFT analysis of high frequency noise

Logic signal measurement and analysis ¹⁰

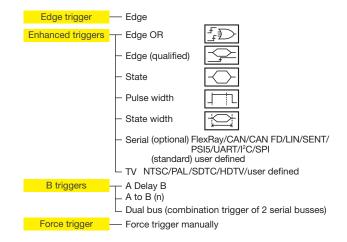

The flexible MSO inputs are included as standard. This enables the DLM4000 to be converted to a 7 analog and 8 digital input MSO. With the /L16 option, up to 24 logic signals can be measured. Bus/State display and optional DA calculation function, which is useful for evaluating AD/ DA converters, are also provided.

Comprehensive waveform display (7 ch + 24 bits)

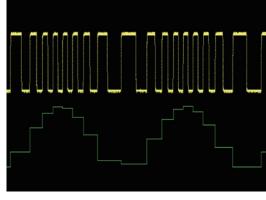

Reliable triggering

When just a specific event or abnormal waveform needs to be captured, the flexible and reliable triggering of the DLM4000 is the solution. In addition to basic trigger functions such as Edge, State, and Pulse Width – Advanced trigger types are provided, including Edge OR between multiple channels, Serial Bus trigger in which A combination of two bus signals is possible, or an A and B combination of different trigger types.

User defined math (/G2, /G4 option)

Equations can be arbitrarily created using a suite of operators such as trigonometric and logarithmic operators, integration and differentiation, pulse width operators, phase measurement and digital to analog conversion.

F-V conversion of encoder pulse signal

¹¹ Automatic parameter measurement and statistical analysis

30 waveform parameters from a total of 29 different types can be displayed simultaneously with a high update rate. In addition to the basic statistical analysis of repetitively measured parameters, the Yokogawa original "cycle statistic" and "history statistic" measurement functions helps the advanced analysis of periodic mechatronic signals. To observe the fluctuations of measured parameters, it is possible to display them as trends. Period-to-period changes can then be easily seen. The variation of parameters can also be displayed as histograms thus providing a visual method of assessing them statistically.

Trend of waveform parameters

Variety of display formats

Many types of display format are supported such as split, dual-zoom, XY, FFT, histogram etc.

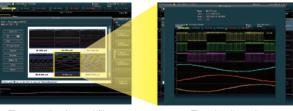

Automatic GO/NO-GO function

The GO/NO-GO function can be used to test the results of parameter measurements, trigger conditions and other criteria and automatically save or print data, send an e-mail etc. Save time using unattended supervisory data acquisition.

Thumbnails of saved files

The image and file names are shown so that you can view screen image contents while copying or deleting files. A file can be enlarged to confirm the data.

Thumbnails of saved files

Thumbnail can be viewed full-size

Built-in user's manual

View detailed graphical explanations of the oscilloscope's functions by pressing the "?" key. Functions and operations can be shown on screen without having to consult the user's manual.

	information
Auxiliary analysis functions	
	Functions (/F10 and /F11 Options)
Applicable standard	PSI5 Airbag (V2.2) ¹⁶
Analyzable signals	CH1 to CH8, M1 to M4
Bit rate	189 kbps, 125 kbps, User Define (10.0 k to 1000.0 kbps, with resolution of 0.1 kbps)
PSI5 Trigger modes	Sync, Start Bit, Data
Analyzable no. of frames	400000 frames max.
List display items	Analysis no., time from trigger position, time from Sync, slot no., Data, Parity/CRC, Information
Auxliary analysis function	Trend functions (up to 4 trend waveforms)
GP-IB (/C1 Option)	
Electromechanical specif	cations Conforms to IEEE std. 488-1978 (JIS C 1901-1987)
Protocol	Conforms to IEEE std. 488.2-1992
Auxiliary Input	
Rear panel I/O signal	External trigger input/output, GO/NO-GO output, video output
Probe interface terminal	8 terminals (front panel)
Probe power terminal	8 terminals (side panel), (/P8 option)
Internal Storage (Star	dard model, /C8 Option)
Capacity	Standard: Approx. 1.8 GB, /C8 option: Approx. 7.2 GB
Built-in Printer (/B5 O	ption)
Built-in printer	112 mm wide, monochrome, thermal
USB Peripheral Conne	action Terminal
Connector	USB type A connector × 2 (front panel)
Electromechanical specif	ications USB 2.0 compliant
Supported transfer stand	ards Low Speed, Full Speed, High Speed
Supported devices	USB Mass Storage Class Ver. 1.1 compliant mass storage devices USB HID Class Ver.1.1 compliant mouse, keyboard
USB-PC Connection	
Connector	USB type B connector × 1
Electromechanical specif	ications USB 2.0 compliant
Supported transfer stand	ards High Speed, Full Speed
Supported class	USBTMC-USB488 (USB Test and Measurement Class Ver. 1.0)
Ethernet	
Connector	RJ-45 connector × 1
Transmission methods	Ethernet (1000BASE-T/100BASE-TX/10BASE-T)
Supported services	Server: FTP, HTTP, VXI-11 Client: FTP, SMTP, SNTP, LPR, DHCP, DNS
General Specification	S
Rated supply voltage	100 to 240 VAC
Rated supply frequency	50 Hz/60 Hz
Maximum power consurr	nption 250 VA (when printer is used)
External dimensions	426 (W) \times 266 (H) \times 178 (D) mm (when printer cover is closed, excluding protrusions)
Weight	Approx. 6.6 kg, With no options
Operating temperature ra	
*1 Measured under standard op Standard operating condition Error in supply voltage and if *2 Value in the case of repetitiv two values, DC to sampling *3 When the input section is short *4 The LCD may include a few de *5 If the trigger function is requir	performs after a 30-minute warm-up followed by calibration. is: Ambient temperature: $23^{\circ} \pm 5^{\circ}$. Ambient humidify: $55 \pm 10^{\circ}$ RH equency: Within 1% of rating phenomenon. The frequency bandwidth of the single-shot phenomenon is the smaller of the frequency/2.5 or the frequency bandwidth of the repetitive phenomenon. et/ the acquisition mode is set to Normal, accumulation is OFF, and the probe attenuation is set to 1 fective pake (within 4 ppm over the total number of pixels including RGB). dt, please contact our sales representative.

	-HL	Italian Message and Panel
	-HS	Spanish Message and Panel
Option	/L16	Logic 16bit
	/B5	Built-in printer (112 mm)
-		Memory expansion
	/M1 ^{•2}	During continuous measurement: 6.25 Mpoints;
		Single mode: 25 Mpoints (when interleave mode ON: 62.5 Mpoints)
		Memory expansion
	/M2*2	During continuous measurement: 12.5 Mpoints;
		Single mode: 62.5 Mpoints (when interleave mode ON: 125 Mpoints)
		Memory expansion
	/M3*2	During continuous measurement: 25 Mpoints;
_		Single mode: 125 Mpoints (when interleave mode ON: 250 Mpoints)
_	/P8 [∗] 3	Eight probe power connectors
_	/C1	GP-IB Interface
_	/C8	Internal storage (7.2 GB)
	/G2*4	User defined math
	/G3 ^{•4}	Power supply analysis function
_	/G4*4	Power supply analysis function (includes /G2)
	/F1 ^{'5}	UART trigger and analysis
	/F2*5	I ² C + SPI trigger and analysis
_	/F3*5	UART + I ² C + SPI trigger and analysis
	/F4*6	CAN + LIN trigger and analysis + CXPI analysis ¹²
	/F5 ^{*6}	FlexRay trigger and analysis
	/F6*6	CAN + LIN + FlexRay trigger and analysis + CXPI analysis ¹²
	/F7 ^{*6}	CAN + CAN FD + LIN trigger and analysis + CXPI analysis ¹²
_	/F8 ^{*6}	CAN+CAN FD+LIN + FlexRay trigger and analysis + CXPI analysis ¹²
_	/F9 ^{*7}	SENT trigger and analysis
	/F10 ^{*7}	PSI5 analysis
	/F11 ^{*7}	SENT + PSI5 trigger and analysis
	/E1 ^{*8}	Four additional 701939 probes (8 in total)
	/E2*8*9	Attach four 701946 probes
	/E3*8*9	Attach eight 701946 probes
Standard M	lain Unit Acc	

Standard Main Unit Accessories Power cord (1 set), Passive probe 701939 (500 MHz, 1.3 m)¹⁰ 4 set, Protective front cover (1 set), Soft carrying case for probes (1 set), Printer roll paper (for /B5 option) 1 roll, Rubber leg cap (1 set), User's manuals*1

- *1: Logic probes are not included. Please order the accessory logic probe 701988/701989 sold separately.

1: Logic probes are not included. Please order the accessory logic probe /01988//01989 sold separately.
 2: Only one from the each note can be selected at a time.
 3: Specify this option when using current probes or differential probes that don't support probe interface.
 4 to '8: Only one from the each note can be selected at a time.
 9: The 701939 probes are not included when this option is selected.
 10: When /E1 option is selected, eight 701939 probes are included. When either /E2 or /E3 option is selected,
 no 701939 probe is included.
 11: Start guide as the printed material, and User's manuals as CD-ROM are included.
 12: If the forgore function is required please control curre cales proceedated.

*12: If the trigger function is required, please contact our sales representative.

NOTICE

• Before operating the product, read the user's manual thoroughly for proper and safe operation

This is a Class A instrument based on Emission standards EN61326-1 and EN55011, and is designed for an industrial environment.

Operation of this equipment in a residential area may cause radio interference, in which case users will be responsible for any interference which they cause.

Accessories (sold separately)

Model	Product	Description
701988	Logic probe (PBL100)	1 MΩ, 100 MHz, 8 inputs
701989	Logic probe (PBL250)	100 kΩ, 250 MHz, 8 inputs
701939	Passive probe ^{*1}	10 MΩ (10:1), 500 MHz, 1.3 m
701946	Miniature passive probe	10 MΩ (10:1), 500 MHz, 1.2 m
702906	Passive probe (wide temperature range)	10 MΩ (10:1), 200 MHz, 2.5 m –40°C to 85°C
700939	FET probe ¹	900 MHz bandwidth, 2.5 MΩ (10:1), 1.8 pF
701944	100:1 high voltage probe	400 MHz bandwidth, 1.2 m, 1000 Vrms
701945	100:1 high voltage probe	250 MHz bandwidth, 3 m, 1000 Vrms
701924	Differential probe (PBDH1000)	1 GHz bandwidth, 1 MΩ (50:1), max. ±25 V
701927	Differential probe (PBDH0150)	150 MHz bandwidth, max. ±1400 V, 1 m extension lead
701920	500 MHz differential probe	500 MHz bandwidth, max. ±12 V
701922	200 MHz differential probe	200 MHz bandwidth, max. ±20 V
700924	100 MHz differential probe	100 MHz bandwidth, max. ±1400 V
701921	100 MHz differential probe	100 MHz bandwidth, max. ±700 V
701926	50 MHz differential probe	50 MHz bandwidth, max. 5000 Vrms
700925	15 MHz differential probe	15 MHz bandwidth, max. ±500 V
701917	Current probe (High-sensitivity) ²	50 MHz bandwidth, max. 5 Arms
701918	Current probe (High-sensitivity) ²	120 MHz bandwidth, max. 5 Arms
701928	Current probe (PBC100) ^{°2}	100 MHz bandwidth, max. 30 Arms
701929	Current probe (PBC050) ²	50 MHz bandwidth, max. 30 Arms
701930	Current probe ^{*2}	10 MHz bandwidth, max. 150 Arms
701931	Current probe*2	2 MHz bandwidth, max. 500 Arms
701936	Deskew correction signal source	For deskew between voltage and current
701919	Probe stand	Round base, 1 arm
B9988AE	Printer roll paper	One lot: 10 rolls, 10 m each
366973	GO/NO-GO cable	GO/NO-GO signal output
701968	Soft carrying case	For DLM4000
701969-E	Rack mount kit for DLM4000	EIA standard-compliant
701969-J	Rack mount kit for DLM4000	JIS standard-compliant

*1: Please refer to the Probes and Accessories brochure for probe adapters *2: Current probes' maximum input current may be limited by the number of the probes used at a time

Accessory Software

Model	Product	Description
701991	MATLAB tool kit	MATLAB plug-in software
701992-SP01 701992-GP01 Xviewer		Viewer software (standard edition)
701992-GP01 Aviewer		Viewer software (MATH edition)

Yokogawa's Approach to Preserving the Global Environment

 Yokogawa's electrical products are developed and produced in facilities that have received ISO14001 approval. . In order to protect the global environment, Yokogawa's electrical products are

designed in accordance with Yokogawa's Environmentally Friendy Product Design Guidelines and Product Design Assessment Criteria.
