M143 Multifunction calibrator is cost saving solution for calibration of meters of electric quantities up to 1000 V and 20 A. It offers basic accuracy 0.01% in DC voltage needed for calibration of 3½ and 4½ digit multimeters. Resistance function is covered by eight fix resistors in range from 10 Ω to 100 MΩ. The calibrator offers TC temperature sensor simulation. It can be delivered optionally as well with RTD temperature sensor simulator. Thanks to its small dimensions and low weight the calibrator can be applied easily for field calibrations.

The calibrator main application field are production lines of panel meters, multimeters, transducers, measuring amplifiers, thermometers, and calibration laboratories where the calibrator can be applied as source of standard value for calibrations, verifications and adjustments of units under test.

Interface RS-232 and optionally GPIB interface bus enable automated operation in remote mode offering time saving automatic calibrations. Model M143 is fully compatible with Meatest calibration SW package CALIBER/WinQbase.

M143 is equipped with blue display with wide viewing. The display contains basic data related to selected function. Three soft buttons with functionally orientated meaning simplify manual control. Display shows always actual accuracy in set test point.

Presence of dangerous voltage over 100 V at the output terminals is always indicated by „Dangerous voltage“ sign. Calibrator indicates dangerous voltage by beeping.

AC/DC maximal output current is 20 A. Output current in range 10 to 20 A has limited period for which it can be continuously applied.

For temperature sensor simulation one of temperature scales PTS68 or ITS90 can be selected. Two types of Pt temperature sensors are predefined, PT 1.385 and PT 1.392.

Calibrator readjustment is simple and user-friendly. Access to calibration values is protected by password.

Option 140-50 Current coil with multiplying coefficient x25 and x50 is a useful tool for calibration of clamp ammeters up to 1000 A at 50/60 Hz signal frequency.

External temperature sensor Pt1000 can be used for automatic compensation of cold junction of simulated thermocouple sensors.

Option 143-60 Cable adapter is designed for simulation of RTD temperature sensors. The adapter is connected to the front panel AUX connector. Platinum and nickel sensors temperature dependency is predefined in the calibrator.
